STAND FOR WII REMOTE™. INCLUDES SPECIAL BATTERY PACK FOR CONTROLLER AND SPACE TO RECHARGE 2 AA BATTERIES

## INSTRUCTION MANUALS

atomic-accessories.com

### BOX CONTENTS

Controller docking charger - rechargeable battery pack - USB™ cable.

### INSTRUCTIONS

- Controller docking charger Atomic is used to charge a special battery pack for Wii controller.
- It matches with special rechargeable battery pack used on Wii controller.
- It supplies power from Wii™ console USB™ interface, no need for other adapters.
- It can hold a Wii controller, and charge a special controller battery pack and two pieces of AA rechargeable battery.
- It has exquisite design, and can be used conveniently.

### USER'S MANUAL

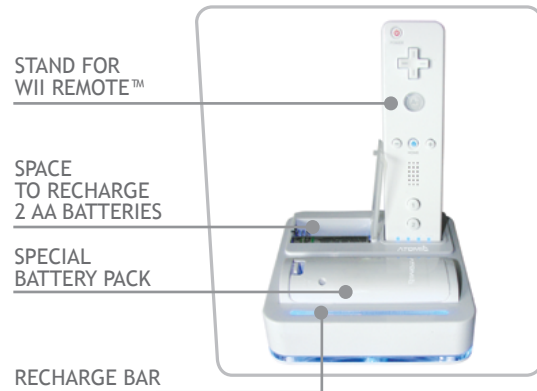

- Connect the DC plug to a 5V DC power source (USB™ plug), the blue light charge station will glisten in blue light all around the charging stand base, while, if any battery pack nor two AA rechargeable batteries are not installed (or when battery pack and two pieces of AA battery is fully charged), blue light beams will glisten from the transparent lightning bar.
- If the battery pack is non-saturated, the left half part will turn red. This means that the battery pack is charging.
- If the two AA rechargeable batteries are non-saturated, the right half part will turn red. This means that the AA batteries are being charged.
- After charging for some time, the left half part of the transparent bar turns blue, meaning that the battery pack is fully charged (if the right half part of the transparent bar turns blue, that means the two AA rechargeable batteries are fully charged); during charging time, if the left and right part of the transparent bar have no glisten that means that the battery pack and AA batteries need further charging. If they are all fully charged, the left and right part will glisten blue light beams.
- When the left (or right) part of the transparent bar turn blue, that means the battery pack (or the two AA batteries) is fully

charged. At the time, the user should take out the battery pack (or the two AA batteries), after the another one is fully charged, he should also switch off the electrical source.

- Maintenance tips: the transparent bar cathode is the left one, and the anode is the right.
